

GENERATIVE AI BOOTCAMP

LEADING THE FUTURE OF INNOVATION

PROGRAM AGENDA

Phase 1 — Foundation

Weeks 1–3 · May 7 – 22

- What is AI & GenAI / **by Shahmaddin Abdullayev**
- Prompt Writing & EthicsGenAI / **by Abdulali Aliyev**
- Business Value & Token Budgeting/ **by Eldar Babayev**

Phase 2 — Applied AI

Weeks 5–13 · Jun 5 – Jul 31

- AI Analysis & On-Premise Deployment / **Mammad Abbasli**
- Advanced Prompting / **Khalid Huseynov**
- *Guest Speaker Sessions*
- Agentic AI / **Bughra Shen**
- MCP Integration & AI Security/ **Bughra Shen**

Phase 3 — Capstone

Weeks 13–16 · Jul 31 – Aug 20

- Design an AI solution for a real banking challenge
- Individual or small team
- Live presentation to stakeholders

PROGRAM SYLLABUS: PHASE 1 (FOUNDATION)

MODULE 1.1

What is AI and GenAI?

- AI, ML, and GenAI: definitions, capabilities, and limitations
- Real-world applications of GenAI in banking

GenAI Use Cases in Banking

- Key GenAI use cases across banking: customer service, operations, risk & compliance, and sales
- Identifying high-value vs non-ready AI use cases

MODULE 1.2

Prompt writing fundamentals

- Structure, examples, iteration, and common mistakes

AI ethics and governance

- Data privacy, regulations, and responsible use in banking

MODULE 1.3

Business Value of GenAI

- Key metrics, ROI estimation, and business case development

AI Costs — Tokens and Budgeting

- Tokens, pricing models, hidden costs, and optimisation

PROGRAM SYLLABUS: PHASE 2 (APPLIED AI)

MODULE 2.1

AI for Analysis & Reporting | On-Premise AI

- Summarize documents and generate insights/reports
- Draft and review internal, client, and regulatory content (incl. validation of AI outputs)
- On-premise AI basics: privacy, control, cloud vs on-premise, open-source models, and governance

MODULE 2.2

Advanced Prompting

- System prompts and personas: controlling tone and behaviour
- Chain-of-thought: asking AI to reason step by step
- RAG (Retrieval-Augmented Generation): grounding AI in your own documents
- Building a reusable prompt library for your team

MODULE 2.3

Agentic AI

- Chatbot vs copilot vs autonomous agent — the key differences
- How agents work: goal · plan · tools · check · repeat
- Multi-agent systems, Banking examples, Risks
- Human-in-the-loop: when a person must approve before the agent proceeds
- Regulatory expectations on autonomous AI decisions

MODULE 2.4

MCP — Connecting AI to Bank Systems

- MCP fundamentals: standard for secure AI-to-system integration
- Practical use: banking examples, access types, and security controls

MODULE 2.5

Hallucinations, Bias and Misuse

- AI security & compliance: data protection, threats (e.g., prompt injection), and governance practices
- Risks & mitigation: hallucinations, bias, misuse, and controls like validation, monitoring, and human review

EXPECTATIONS FROM YOU

Active participation

- Take part in all sessions, discussions.
- Complete regular homework during the program.
- At the end, You will work on a Capstone Project.

Attendance

Stay engaged throughout the program; a maximum of 1 excused absence is allowed.

Curiosity and experimentation

Try new ideas and explore how GenAI can help your work.

Responsible AI use

- Follow data privacy, security, and ethical guidelines in all activities.
- Participants will get access to selected GenAI tools and LLMs.
- Access details will be shared before the sessions.

Continuous improvement

- Give feedback and actively improve throughout the program.
- For any technical or logistical questions, support will be available. Please contact via **Microsoft Teams group**

THANK YOU!
